Professional Summary

Python Backend Developer with two years of professional experience building web applications from scratch with Flask, Django, and FastAPI on PostgreSQL and MySQL as the sole developer at OrphaNova Inc. Experienced in designing RESTful APIs with JWT authentication, writing unit tests with pytest, and containerizing services with Docker. Owns the full development lifecycle, from requirement analysis and system design to testing, deployment, and production support, with a focus on clean, well-documented, and maintainable code.

EDUCATION

University of Bridgeport, Bridgeport, CT May 2026
Master of Science in Computer Science

Malla Reddy College of Engineering and Technology, Hyderabad, India 2020 – 2024
Bachelor of Technology in Computer Science and Engineering

TECHNICAL SKILLS

Languages: Python, SQL, Java, C, JavaScript.

Backend: Flask, Django, FastAPI, RESTful APIs, CRUD, JWT Authentication, Role-Based Access Control.

Databases: PostgreSQL, MySQL, SQLite.

Testing: pytest, Unit Testing, API Testing, Postman.

DevOps & Tools: Git, GitHub, GitHub Actions (CI), Docker, Linux.

Other: OpenCV, TensorFlow, Object-Oriented Programming (OOP), Agile.

PROFESSIONAL EXPERIENCE

Python Full Stack Developer (Contract) Aug 2024 – Present
OrphaNova Inc. – Remote, New York, NY

- Built the company's web applications from scratch as the sole developer, owning requirement analysis, system design, development, testing, deployment, and production support.
- Design, develop, and maintain backend services and REST APIs in Python using FastAPI and Django, implementing business logic, authentication, request validation, error handling, and logging.
- Build and integrate REST APIs and microservices that let the company's applications and services communicate with each other.
- Write SQL queries and manage application data in PostgreSQL and MySQL, tuning queries to improve database performance.
- Write unit and integration tests, debug application issues, and resolve production problems through root-cause analysis and targeted fixes.
- Optimize backend services for performance, scalability, security, and reliability, managing all source code with Git.
- Maintain technical documentation for APIs, application components, and development processes.

PROJECTS

Notes Management REST API (Python, Flask, JWT, PostgreSQL, pytest, Docker) 2024

- Built a RESTful API with JWT authentication, role-based access control, and input validation on incoming requests.
- Prevented SQL injection with parameterized queries; reached 85% unit test coverage with pytest, run automatically through a GitHub Actions CI pipeline.
- Containerized with Docker and documented all 12 endpoints in a Postman collection with structured JSON error responses.

User Management REST API (Python, Flask, SQLite, Docker) 2024

- Built a RESTful API for the full user lifecycle (create, read, update, delete) using a three-layer architecture: routes, business logic, and data access.
- Containerized with Docker and published on GitHub with complete README documentation.

Real-Time Fall Detection System (Python, OpenCV, TensorFlow, pytest) 2023

- Built a computer vision pipeline that detects falls in live video using pose estimation and multi-angle motion tracking, reaching 92% accuracy.
- Fine-tuned the TensorFlow model and validated the system with automated pytest test cases.
